

# Jogger

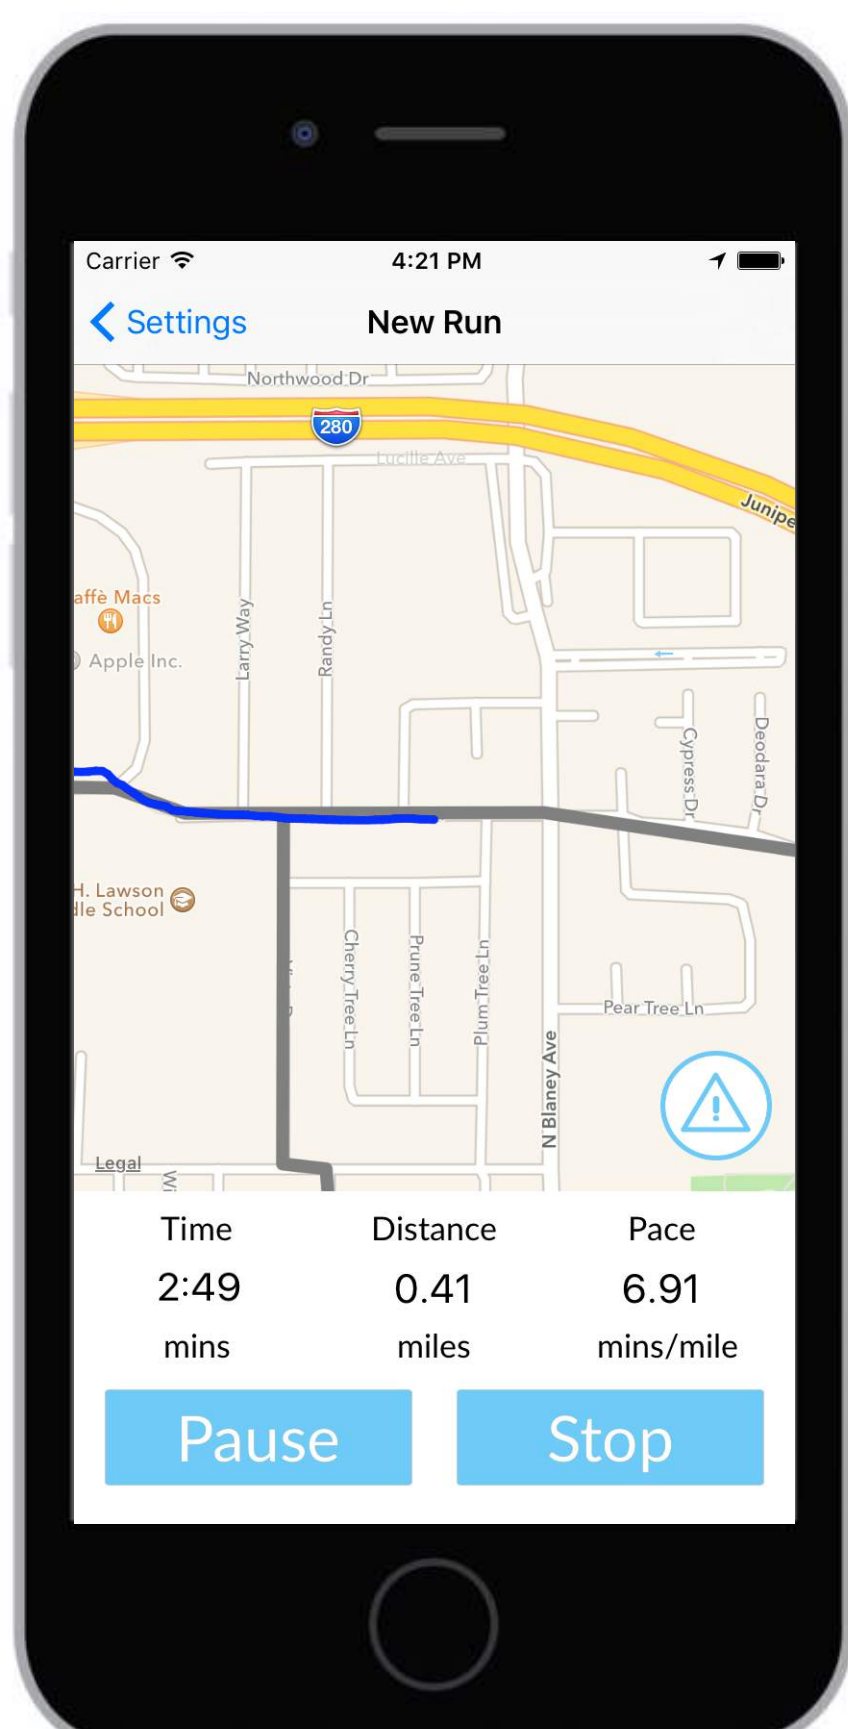

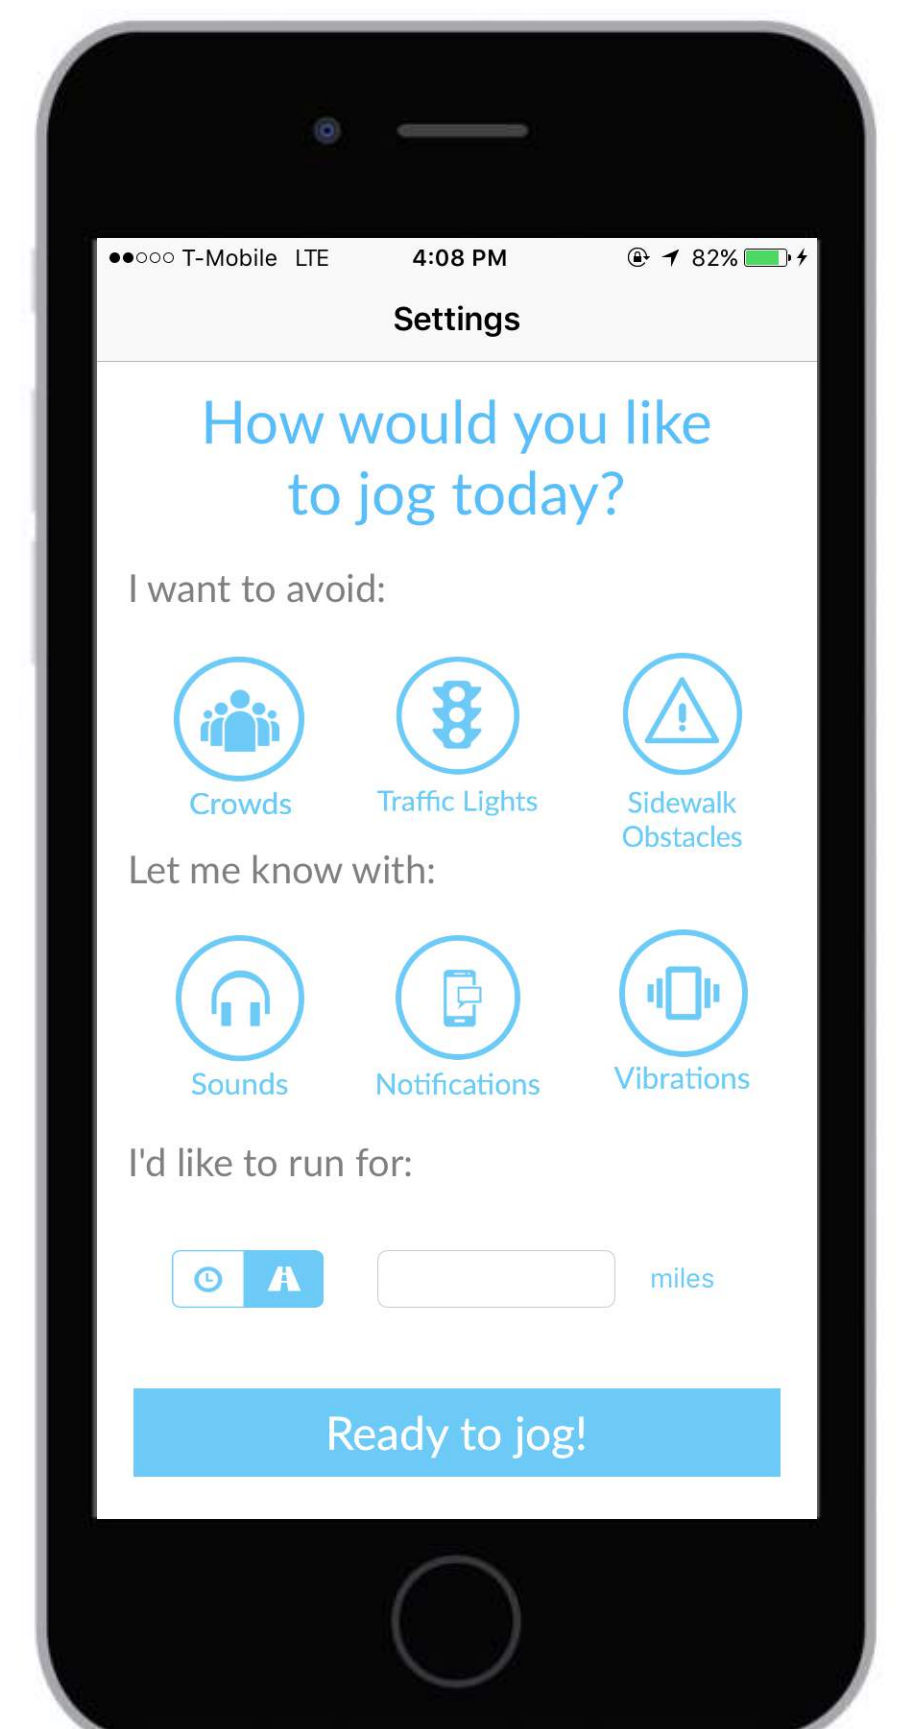

Jogging in the city comes with many frustrating obstacles, such as crowded streets and traffic lights. Jogger is an urban sidewalk navigation system that knows the city and guides joggers so they can avoid obstacles and run unobstructed.

## CHOOSE YOUR JOG STYLE

Before each run, tailor Jogger to your own style by choosing which obstacles you want to avoid and how you want Jogger to communicate directions with you.

## RECEIVE REAL-TIME FEEDBACK

During your run, Jogger will provide you with suggested directions in real-time so you know when to go and when to turn.

## REPORT NEW OBSTACLES

At any point during your run, if you encounter an unexpected obstacle you can report it to Jogger to expand Jogger's database and improve future jogs.
